Revision Log

Date	Changed by	Revisions	Version
December 2025	K. Schneider	Expended the width of PRVDR_NUM and PRVDR_GRP_ID	1.3
December 2024	K. Schneider	- Added new valid values to PRVDR_CLSFCTN_CD - Updated value descriptions and added new values to BED_TYPE_CD - Added new criterion to the “COMMENT” for SUD_SRVC_PRVDR_CLSFCTN_IND - Added Guam to STATE_CD and SUBMTG_STATE_CD and added detail to SUBMTG_STATE_CD for MT TPA (94) and WY CHIP (93). Included values for some additional territories in PRVDR_STATE_CD. Re-ordered all valid values for the provider *_TXNMY_IND fields to be in alphanum order	1.2
October 2022	K. Schneider	- Added new valid values to PRVDR_CLSFCTN_CD - Added new valid value “N” to PRVDR_CLSFCTN_SYS, which resulted in downstream addition of this code to all the dichotomous taxonomy indicator variables in the APR base file. The following indicator variables also had one or more additional taxonomy code added to the definition ALPTHC_OSTPTHC_PHYSN_TXNMY_IND, BHVRL_HLTH_SCL_SRVC_TXNMY_IND, DNTL_TXNMY_IND, DTRY_NTRTNL_SRVC_TXNMY_IND, OTHR_INDVDL_SRVC_TXNMY_IND, RT_DEVMTL_REHAB_RSTRTV_TXNMY_IND, and TRANSPRTN_SRVC_TXNMY_IND	1.1
June 2021	K. Schneider A. Meyer	Initial release of codebook	1.0

Tips on Navigating the Codebook

This document is a detailed codebook that describes each variable in the annual provider (APR) Transformed Medicaid Statistical Information System (T-MSIS) Analytic File (TAF) research files. The guide includes several ways for users to quickly find the information they need:

- A complete listing of all variables in the files, in alphabetical order based on their SAS variable names
- Individual entries for each variable contain a short description of the variable, the possible values for the variable, and notes discussing the variable construction and use

The CCW team has included hyperlinks throughout the codebook to make it easier for users to navigate between the table of contents and the detailed entries for the individual variables:

- Clicking on any variable name in the Table of Contents takes users to the detailed description for that variable
- From the detailed description for any individual variable, clicking on the [^Back to TOC^](#) link after each variable description takes users back to the Table of Contents

Table of Contents

This section of the codebook contains a list of all variables in alphabetical order based on the SAS variable name.

SRVC_LCTN_IND

LABEL: Service Location Indicator

DESCRIPTION: Indicator denoting if this is a service location address type for the provider.

SHORT NAME: SRVC_LCTN_IND

LONG NAME: SRVC_LCTN_IND

TYPE: CHAR

LENGTH: 1

FILE(S): APR Location

SOURCE: T-MSIS annual provider TAF

VALUES:
0 = No
1 = Yes

COMMENT: There can be multiple records per CCW_APR_LINK_KEY.

On records where the value of this field equals 1, the address components always reflect those of the service location address. If no service location exists for the provider, the address from the practice location is used. Where no service or practice locations exist, the billing location is used.

When the provider location ID (variable called PRVDR_LCTN_ID) equals '000', it means that a license or identifier applies to all locations for the provider. When the state sends a license or identifier record with PRVDR_LCTN_ID '000' but no corresponding location record, a record location record is added to ensure referential integrity.
